

GO Assignment

Ryan Amundson

Northwestern University

Edward Arroyo

November 7, 2021

Requirements

Use the provided Go program to REFACTOR/REUSE the provided code snippets and implement the following requirements:

Requirement 1:

Print the total number of orders for every delivery Zipcode in transactions_log. Create a goroutine to execute this requirement

```
requirement_1 := "SELECT deliveryzipcode, SUM(quantity) as count
FROM transactions_log GROUP BY deliveryzipcode "
go gopher_transactions_log(requirement_1, ch)
fmt.Println(<-ch)
```

Requirement 2:

Print the total number of returned orders for every delivery Zipcode in transactions_log. Create a goroutine to execute this requirement

```
requirement_2 := "SELECT deliveryzipcode, SUM(CASE WHEN
orderreturned = 'Yes' THEN 1 ELSE 0 END) as count FROM
transactions_log GROUP BY deliveryzipcode"
go gopher_transactions_log(requirement_2, ch)
fmt.Println(<-ch)
```

```
func gopher_transactions_log(query string, ch chan<- string) {

    fmt.Println("Started: Goroutine gopher_transactions_log")

    psqlInfo := fmt.Sprintf("host=%s port=%d user=%s "+
        "dbname=%s sslmode=disable",
        host, port, user, dbname)

    db, err := sql.Open("postgres", psqlInfo)
    if err != nil {
        panic(err)
    }
}
```

```

    }
    defer db.Close()

    rows, err := db.Query(query)
    if err != nil {
        panic(err)
    }
    defer rows.Close()

    for rows.Next() {
        err := rows.Scan(&zipcode, &count)
        if err != nil {
            panic(err)
        }
        fmt.Println("\n", zipcode, count)
    }

    err = rows.Err()
    if err != nil {
        panic(err)
    }

    ch <- "Completed: Goroutine for gopher_transactions_log"
}

```

Requirement 3:

Get the list of warehouses with the count of orders returned for every warehouse in DESC order. Create a goroutine to execute this requirement

```

requirement_3 := fmt.Sprintf("SELECT warehouse_id, SUM(CASE
WHEN orderreturned = 'Yes' THEN 1 else 0 END) as count FROM
transactions_log tl INNER JOIN logistics_supply_chain_network ln

```

```

ON tl.deliveryzipcode = ln.zipcode GROUP BY warehouse_id ORDER
by SUM(CASE WHEN orderreturned = 'Yes' THEN 1 ELSE 0 END) DESC")
    go gopher_warehouse_returns(requirement_3, ch)
    fmt.Println(<-ch)

func gopher_warehouse_returns(query string, ch chan<- string) {

    fmt.Println("Started: Goroutine gopher_warehouse_returns")

    psqlInfo := fmt.Sprintf("host=%s port=%d user=%s "+
        "dbname=%s sslmode=disable",
        host, port, user, dbname)

    db, err := sql.Open("postgres", psqlInfo)
    if err != nil {
        panic(err)
    }
    defer db.Close()

    rows, err := db.Query(query)
    if err != nil {
        panic(err)
    }
    defer rows.Close()

    for rows.Next() {
        err := rows.Scan(&warehouse_id, &count)
        if err != nil {
            panic(err)
        }
        fmt.Println("\n", warehouse_id, count)
    }

    err = rows.Err()
    if err != nil {
        panic(err)
    }
}

```

```

    }

    ch <- "Completed: Goroutine for gopher_warehouse_returns"

}

```

Requirement 4:

Create 2 bar-charts for every zip, where you use the first bar-chart to show total number of Transactions Ordered, Returned, and Kept for every product category, and use the second bar-chart to show the total for Sales, Profit, Shippingcost for every product category. Three bars for every category in every chart. Create goroutines to execute this requirement. Also you must create a subdirectory called charts in your current workspace where all charts are saved.

```

func gopher_total_sales_profit_shippingcost_chart(zipcode
string, ch chan<- string) {

    fmt.Println("Started: Goroutine
gopher_total_sales_profit_shippingcost_chart for Zip Code = ",
zipcode)

    var (
        category string
        count     string
    )

    var m = make(map[string]SalesPerCategory)

    sales := fmt.Sprintf("SELECT Category, sum(sales) as count
FROM transactions_log "+
        "WHERE deliveryzipcode='%s' "+
        "GROUP BY Category", zipcode)

```

```

    shipping := fmt.Sprintf("SELECT Category, sum(shippingcost)
as count FROM transactions_log "+
    "WHERE deliveryzipcode='%s' "+
    "GROUP BY Category", zipcode)

    profit := fmt.Sprintf("SELECT Category, sum(profit) as count
FROM transactions_log "+
    "WHERE deliveryzipcode='%s' "+
    "GROUP BY Category", zipcode)

    psqlInfo := fmt.Sprintf("host=%s port=%d user=%s "+
    "dbname=%s sslmode=disable",
    host, port, user, dbname)

    db, err := sql.Open("postgres", psqlInfo)
    if err != nil {
        panic(err)
    }
    defer db.Close()

    // Query Total Sales

    rows, err := db.Query(sales)
    if err != nil {
        panic(err)
    }
    defer rows.Close()

    for rows.Next() {
        err := rows.Scan(&category, &count)
        if err != nil {
            panic(err)
        }

        floatCount, err := strconv.ParseFloat(count, 64)
        if err != nil {

```

```

        panic(err)
    }

    m[category] = SalesPerCategory{
        floatCount, 0, 0,
    }
}

err = rows.Err()
if err != nil {
    panic(err)
}

// Query returned Profit
rows, err = db.Query(profit)
if err != nil {
    panic(err)
}
defer rows.Close()

for rows.Next() {
    err := rows.Scan(&category, &count)

    }
}

```

Requirement #5:

Rerun your program (including the implementation all requirements listed above) and execute the following experiments to collect the Elapsed Time measurement for every run of your program, and use the measurement results to fill in the Elapsed Time column in the table below:

	runtime.GOMAXPROCS	Concurrent Goroutines	Elapsed Time
Experiment #1	1	2	49m21.282598382s
Experiment #2	1	4	Exception has occurred: panic • "pq: sorry, too many clients already"
Experiment #3	runtime.NumCPU()	2	29m57.725502639s
Experiment #4	runtime.NumCPU()	4	Out of time
Experiment #5	runtime.NumCPU()	runtime.NumCPU()	Out of time
Experiment #6	runtime.NumCPU()	runtime.NumCPU() * 4	23m2.251553812s

Requirement #6:

The following trace of the program run shows that Zipcode 02107 has no transactions in the database, common sense tells us that it is highly likely that is not the case. Investigate this problem and provide a fix. Both source code and output must be provided. How many of the zipcodes have the same problem?

LOL, this is a good one, it looks like the four digit zipcodes in the deliveryzipcode and homezipcode columns are not left zero padded in the transaction_log table, but they are properly zero padded in logistics_supply_chain_network table. It looks like there are 54 zip codes that have this problem. The proper fix would be to update those zip codes to have them zero padded.

```
onmart=> SELECT count(*) from transactions_log WHERE deliveryzipcode =  
'2106' LIMIT 1;  
count  
-----  
4029  
(1 row)
```

```
onmart=> SELECT COUNT ( DISTINCT deliveryzipcode) from  
transactions_log WHERE LENGTH(deliveryzipcode) = 4;  
count  
-----  
54  
(1 row)
```

The fix should be:

```
UPDATE  
  transaction_log  
SET  
  deliveryzipcode = '0' + deliveryzipcode  
WHERE  
  LENGTH(deliveryzipcode) = 4;
```

Program output

```
